INDEX TO AUTHORS

A

Abraham, S. See *Katz, Abraham, Hill, and Chaikoff*, 853

Adler, Julius. See *Parks, Adler, and Copenhaver*, 693

Alexander, Nicholas, and **Greenberg, David M.** Studies on the biosynthesis of serine, 821

Allard, Claude. See *de Lamirande, Allard, and Cantero*, 519

Amundsen, Lawrence H. See *Herbst, Glinos, and Amundsen*, 175

Anderson, Ethel I. See *Weiss, Anderson, Hsu, and Stekol*, 239

Auerbach, V. H. See *Knox and Auerbach*, 307

Axelrod, Julius. The enzymatic deamination of amphetamine (Benzedrine), 753

B

Barsky, James. See *Zeller, Barsky, and Berman*, 267

Beaton, J. R., and **Ozawa, G.** Activity of liver glutaminases in vitamin B_6-deficient rats, 685

Beauchene, Roy E., Berneking, A. D., Schrenk, W. G., Mitchell, H. L., and **Silker, Ralph E.** The quantitative estimation of amino nitrogen by determination of bound copper with the flame photometer, 731

Beck, L. W. See *Mattson and Beck*, 115

Beer, Charles T., and **Gallagher, T. F.** Excretion of estrogen metabolites by humans. I. The fate of small doses of estrone and estradiol-17β, 335

— and —. II. The fate of large doses of estradiol-17β after intramuscular and oral administration, 351

Behrens, Otto K. See *Staub, Sinn, and Behrens*, 619

Benton, D. A., Harper, A. E., Winje, M. E., and **Elvehjem, C. A.** Compounds other than threonine that affect fat deposition in the livers of rats fed low protein diets, 677

Berg, Clarence P. See *Langner and Berg*, 699

Berg, Marie. See *Watson and Berg*, 537

—. See *Watson, Berg, and Hawkinson*, 547

Berman, Elaine R. See *Zeller, Barsky, and Berman*, 267

Berneking, A. D. See *Beauchene, Berneking, Schrenk, Mitchell, and Silker*, 731

Bloch, Hubert. See *Noll and Bloch*, 251

Bloch, Konrad. See *Mandeles and Bloch*, 639

Bollman, Jesse L. See *Flock and Bollman*, 709

Borgström, Bengt. Randomization of glyceride fatty acids during absorption from the small intestine of the rat, 671

Borman, Aleck. See *Rose, Borman, Coon, and Lambert*, 579

Bowden, John P., and **Schantz, Edward J.** The isolation and characterization of dermatitic compounds produced by *Myrothecium verrucaria*, 365

Boyer, P. D. See *Robertson and Boyer*, 295

Brodie, Bernard B. See *La Du, Gaudette, Trousof, and Brodie*, 741

Buettner-Janusch, Vina. See *Smith, McFadden, Stockell, and Buettner-Janusch*, 197

Burns, J. J., Mosbach, E. H., Schulenberg, Shirley, and **Reichenthal, Jules.** Studies on the incorporation of C^{14} administered as L-sorbose into L-ascorbic acid and D-glucose in rats, 507

C

Cantero, Antonio. See *de Lamirande, Allard, and Cantero*, 519

Cardini, C. E., Leloir, Luis F., and **Chiriboga, J.** The biosynthesis of sucrose, 149
—. See *Leloir and Cardini*, 157
Carleton, Frederick J., Misler, Samuel, and **Roberts, Henry R.** Comparison of the metabolism of C^{14}-labeled lactose, glucose, and galactose in rats, 427
Castelfranco, Paul, Stumpf, P. K., and **Contopoulou, Rebecca.** Fat metabolism in higher plants. V. A soluble palmitate oxidase requiring glycolic acid as activator, 567
Ceriotti, Giovanni. Determination of nucleic acids in animal tissues, 59
Chaikoff, I. L. See *Hillyard, Entenman, Feinberg, and Chaikoff*, 79
—. See *Katz, Abraham, Hill, and Chaikoff*, 853
Cheldelin, Vernon H. See *Hauge, King, and Cheldelin*, 1,11
—. See *Newburgh and Cheldelin*, 37
—. See *Newburgh, Claridge, and Cheldelin*, 27
Chichester, C. O., Nakayama, T., Mackinney, G., and **Goodwin, T. W.** Incorporation of labeled leucine into carotene by *Phycomyces*, 515
Chiriboga, J. See *Cardini, Leloir, and Chiriboga*, 149
Claridge, C. A. See *Newburgh, Claridge, and Cheldelin*, 27
Contopoulou, Rebecca. See *Castelfranco, Stumpf, and Contopoulou*, 567
Coon, Minor J. See *Rose, Borman, Coon, and Lambert*, 579
Copenhaver, J. H., Jr. See *Parks, Adler, and Copenhaver*, 693
Cori, Gerty T. See *Keller and Cori*, 127
Cotzias, George C. See *Maynard and Cotzias*, 489

D

Dandliker, Walter B., and **Fox, Jay B., Jr.** Light scattering of D-glyceraldehyde-3-phosphate dehydrogenase, 275
D'Angeli, F., Koski, Ruth E., and **Henderson, L. M.** Metabolism of compounds related to 3-hydroxyanthranilic acid, 781
Davis, Neil C., and **Smith, Emil L.** Action of tripeptidase on dipeptides of appropriate structure, 209
Deutsch, H. F., and **Seabra, Affonso.** Immunochemical studies and assay of catalase, 455
—. See *Seabra and Deutsch*, 447
Dixon, F. J. See *Mirsky, Perisutti, and Dixon*, 397
Dutton, H. J. See *Scholfield and Dutton*, 633

E

Eagle, Harry. The specific amino acid requirements of a mammalian cell (strain L) in tissue culture, 839
Elvehjem, C. A. See *Benton, Harper, Winje, and Elvehjem*, 677
Engle, Robert R. See *Schaffer, Harshman, and Engle*, 799
Entenman, C. See *Hillyard, Entenman, Feinberg, and Chaikoff*, 79

F

Feinberg, H. See *Hillyard, Entenman, Feinberg, and Chaikoff*, 79
Felsing, Barbara. See *Ravel, Felsing, Lansford, Trubey, and Shive*, 497
Fineberg, Richard A., and **Greenberg, David M.** Ferritin biosynthesis. I. Crystallization of guinea pig ferritin, 91
— and —. II. Acceleration of synthesis by the administration of iron, 97
— and —. III. Apoferritin, the initial product, 107
Flock, Eunice V., and **Bollman, Jesse L.** The metabolism of thyroxine and triiodothyronine in the eviscerated rat, 709
Fox, Jay B., Jr. See *Dandliker and Fox*, 275
de Fremery, Donald, and **Knight, C. A.** A chemical comparison of three strains of tomato bushy stunt virus, 559

Fried, Melvin. See *Keller and Fried*, 143

G

Gallagher, T. F. See *Beer and Gallagher*, 335, 351
Gaudette, Leo. See *La Du, Gaudette, Trousof, and Brodie*, 741
Glinos, Eleanor Bartlett. See *Herbst, Glinos, and Amundsen*, 175
Goodwin, T. W. See *Chichester, Nakayama, Mackinney, and Goodwin*, 515
Greenberg, David M. See *Alexander and Greenberg*, 821
—. See *Fineberg and Greenberg*, 91, 97, 107

H

de la Haba, G., Leder, I. G., and **Racker, E.** Crystalline transketolase from bakers' yeast: isolation and properties, 409
Halsey, Yadviga Dowmont. The reaction of methyl mercury nitrate with the sulfhydryl groups of yeast glyceraldehyde-3-phosphate dehydrogenase, 589
Hanahan, Donald J. See *Rodbell and Hanahan*, 595, 607
Hara, Masaru. See *Takeda and Hara*, 657
Harper, A. E. See *Benton, Harper, Winje, and Elvehjem*, 677
Harris, J. Ieuan, and **Knight, C. A.** Studies on the action of carboxypeptidase on tobacco mosaic virus, 215
Harshman, Sidney. See *Schaffer, Harshman, and Engle*, 799
Hastings, A. Baird. See *Landau, Hastings, and Nesbett*, 525
Hauge, Jens G., King, Tsoo E., and **Cheldelin, Vernon H.** Alternate conversions of glycerol to dihydroxyacetone in *Acetobacter suboxydans*, 1
—, —, and —. Oxidation of dihydroxyacetone via the pentose cycle in *Acetobacter suboxydans*, 11
Hausberger, F. X., and **Milstein, S. W.** Dietary effects on lipogenesis in adipose tissue, 483
Hawkinson, Violet. See *Watson, Berg, and Hawkinson*, 547
Henderson, L. M. See *D'Angeli, Koski, and Henderson*, 781
Herbst, Edward J., Glinos, Eleanor Bartlett, and **Amundsen, Lawrence H.** An analysis of the putrescine requirement of *Hemophilus parainfluenzae*, 175
Hers, H. G. The conversion of fructose-1-C^{14} and sorbitol-1-C^{14} to liver and muscle glycogen in the rat, 373
Hill, R. See *Katz, Abraham, Hill, and Chaikoff*, 853
Hillyard, L. A., Entenman, C., Feinberg, H., and **Chaikoff, I. L.** Lipide and protein composition of four fractions accounting for total serum lipoproteins, 79
Hotchkiss, Rollin D. See *Marmur and Hotchkiss*, 383
Hsu, Peng Tung. See *Weiss, Anderson, Hsu, and Stekol*, 239
Hurley, Patricia D. See *Sacks, Hurley, and Young*, 723

K

Katz, J., Abraham, S., Hill, R., and **Chaikoff, I. L.** The occurrence and mechanism of the hexose monophosphate shunt in rat liver slices, 853
Keller, Patricia J. The action of trypsin on phosphorylase *a*, 135
— and **Cori, Gerty T.** Purification and properties of the phosphorylase-rupturing enzyme, 127
— and **Fried, Melvin.** Inhibition of the phosphorylase-rupturing enzyme by some trypsin substrates, 143
King, Tsoo E. See *Hauge, King, and Cheldelin*, 1, 11
Kisliuk, Roy L., and **Sakami, Warwick.** A study of the mechanism of serine biosynthesis, 47
Knight, C. A. The action of carboxypeptidase on strains of tobacco mosaic virus, 231

Knight, C. A. See *de Fremery and Knight*, 559
—. See *Harris and Knight*, 215
Knox, W. Eugene, and **Auerbach, V. H.** The hormonal control of tryptophan peroxidase in the rat, 307
Koski, Ruth E. See *D'Angeli, Koski, and Henderson*, 781

L

La Du, Bert N., Gaudette, Leo, Trousof, Natalie, and **Brodie, Bernard B.** Enzymatic dealkylation of aminopyrine (Pyramidon) and other alkylamines, 741
Lambert, G. Frederick. See *Rose, Borman, Coon, and Lambert*, 579
de Lamirande, Gaston, Allard, Claude, and **Cantero, Antonio.** Heterogeneity of intracellular ribonucleic acid in rat liver cells, 519
Landau, Bernard R., Hastings, A. Baird, and **Nesbett, Frances B.** Origin of glucose and glycogen carbons formed from C^{14}-labeled pyruvate by livers of normal and diabetic rats, 525
Langdon, Robert G., and **Weakley, David R.** The influence of hormonal factors and of diet upon hepatic glucose-6-phosphatase activity, 167
Langner, Ralph R., and **Berg, Clarence P.** Metabolism of D-tryptophan in the normal human subject, 699
Lansford, Edwin M., Jr. See *Ravel, Felsing, Lansford, Trubey, and Shive*, 497
Lardy, Henry A. See *Maley and Lardy*, 765
Leder, I. G. See *de la Haba, Leder, and Racker*, 409
Leete, Edward, Marion, Léo, and **Spenser, Ian D.** The biogenesis of alkaloids. XIII. The rôle of ornithine in the biosynthesis of stachydrine, 71
Leloir, Luis F., and **Cardini, C. E.** The biosynthesis of sucrose phosphate, 157
—. See *Cardini, Leloir, and Chiriboga*, 149
Lewis, U. J., and **Schweigert, B. S.** Biochemistry of myoglobin. III. Homogeneity studies with crystalline beef myoglobin, 647
Lucas, Fred V., Neufeld, Harold A., Utterback, James G., Martin, Arlene P., and **Stotz, Elmer.** The effect of estrogen on the production of a peroxidase in the rat uterus, 775

M

Mackinney, G. See *Chichester, Nakayama, Mackinney, and Goodwin*, 515
Maley, Frank, and **Lardy, Henry A.** Synthesis of *N*-substituted glucosamines and their effect on hexokinase, 765
Mandeles, Stanley, and **Bloch, Konrad.** Enzymatic synthesis of γ-glutamylcysteine, 639
Marion, Léo. See *Leete, Marion, and Spenser*, 71
Marmur, Julius, and **Hotchkiss, Rollin D.** Mannitol metabolism, a transferable property of pneumococcus, 383
Martin, Arlene P. See *Lucas, Neufeld, Utterback, Martin, and Stotz*, 775
Marx, Walter. See *Wainfan and Marx*, 441
Mattson, F. H., and **Beck, L. W.** The digestion *in vitro* of triglycerides by pancreatic lipase, 115
Maynard, Laurence S., and **Cotzias, George C.** The partition of manganese among organs and intracellular organelles of the rat, 489
McFadden, Mary L., and **Smith, Emil L.** Free amino groups and *N*-terminal sequence of rabbit antibodies, 185
—. See *Smith, McFadden, Stockell, and Buettner-Janusch*, 197
Milstein, S. W. See *Hausberger and Milstein*, 483
Mirsky, I. Arthur, Perisutti, Gladys, and **Dixon, F. J.** The destruction of I^{131}-labeled insulin by rat liver extracts, 397

Misler, Samuel. See *Carleton, Misler, and Roberts,* 427
Mitchell, H. L. See *Beauchene, Berneking, Schrenk, Mitchell, and Silker,* 731
Mosbach, E. H. See *Burns, Mosbach, Schulenberg, and Reichenthal,* 507

N

Nakayama, T. See *Chichester, Nakayama, Mackinney, and Goodwin,* 515
Narahara, Hiromichi T. See *Tomizawa, Nutley, Narahara, and Williams,* 285
Nesbett, Frances B. See *Landau, Hastings, and Nesbett,* 525
Neufeld, Harold A. See *Lucas, Neufeld, Utterback, Martin, and Stotz,* 775
Newburgh, R. W., and **Cheldelin, Vernon H.** Oxidation of carbohydrates by the pea aphid, *Macrosiphum pisi* (Kltb.), 37
—, **Claridge, C. A.,** and **Cheldelin, Vernon H.** Carbohydrate oxidation by the wheat smut fungus, *Tilletia caries,* 27
Noll, Hans, and **Bloch, Hubert.** Studies on the chemistry of the cord factor of *Mycobacterium tuberculosis,* 251
Nutley, Mary L. See *Tomizawa, Nutley, Narahara, and Williams,* 285

O

Ozawa, G. See *Beaton and Ozawa,* 685

P

Parks, R. E., Jr., Adler, Julius, and **Copenhaver, J. H., Jr.** The efficiency of oxidative phosphorylation in mitochondria from diabetic rats, 693
Pelton, Richard B. See *Rogers, Pelton, and Williams,* 503
Perisutti, Gladys. See *Mirsky, Perisutti, and Dixon,* 397

Q

Quastel, J. H., and **Scholefield, P. G.** Inhibitory action of *meso*-tartrate on pyruvate oxidation, 245

R

Racker, E. See *de la Haba, Leder, and Racker,* 409
Ravel, Joanne M., Felsing, Barbara, Lansford, Edwin M., Jr., Trubey, Robert H., and **Shive, William.** Reversal of alcohol toxicity by glutamine, 497
Reichenthal, Jules. See *Burns, Mosbach, Schulenberg, and Reichenthal,* 507
Roberts, Henry R. See *Carleton, Misler, and Roberts,* 427
Robertson, H. E., and **Boyer, P. D.** The effect of azide on phosphorylation accompanying electron transport and glycolysis, 295
Rodbell, Martin, and **Hanahan, Donald J.** Lecithin synthesis in liver, 607
— and —. Some aspects of the metabolism of lecithin and its derivatives in liver, 595
Rogers, Lorene L., Pelton, Richard B., and **Williams, Roger J.** Voluntary alcohol consumption by rats following administration of glutamine, 503
Rose, William C., Borman, Aleck, Coon, Minor J., and **Lambert, G. Frederick.** The amino acid requirements of man. X. The lysine requirement, 579
Rosenkrantz, Harris. Studies in vitamin E deficiency. I. The oxygen consumption of various tissues from the rabbit, 789

S

Sacks, Jacob, Hurley, Patricia D., and **Young, Jerry M., Jr.** The metabolic inhomogeneity of ribonucleic acid phosphorus, 723
Sakami, Warwick. See *Kisliuk and Sakami,* 47
Salmon, W. D. See *Sauberlich and Salmon,* 463
Sauberlich, H. E., and **Salmon, W. D.** Amino acid imbalance as related to tryptophan requirement of the rat, 463

Schaffer, Norwood K., Harshman, Sidney, and **Engle, Robert R.** Phosphoserylglycine from diisopropylphosphoryl chymotrypsin and inversion of its peptide sequence by acid, 799
Schantz, Edward J. See *Bowden and Schantz*, 365
Schjeide, Ole Arne. Studies of the New Hampshire chicken embryo. V. Lipides of whole plasma and of plasma lipoproteins, 315
Scholefield, P. G. See *Quastel and Scholefield*, 245
Scholfield, C. R., and **Dutton, H. J.** Preparation of phosphatidyl ethanolamine from soy bean phosphatides, 633
Schrenk, W. G. See *Beauchene, Berneking, Schrenk, Mitchell, and Silker*, 731
Schulenberg, Shirley. See *Burns, Mosbach, Schulenberg, and Reichenthal*, 507
Schweigert, B. S. See *Lewis and Schweigert*, 647
Seabra, Affonso, and **Deutsch, H. F.** Studies on catalase inhibition as related to tumors, 447
—. See *Deutsch and Seabra*, 447
Shive, William. See *Ravel, Felsing, Lansford, Trubey, and Shive*, 497
Siegel, Jack M., and **Smith, Arthur A.** The dark aerobic metabolism of acetone by the photosynthetic bacterium *Rhodopseudomonas gelatinosa*, 475
Silker, Ralph E. See *Beauchene, Berneking, Schrenk, Mitchell, and Silker*, 731
Sinn, L. See *Staub, Sinn, and Behrens*, 619
Smith, Arthur A. See *Siegel and Smith*, 475
Smith, Emil L., McFadden, Mary L., Stockell, Anne, and **Buettner-Janusch, Vina.** Amino acid composition of four rabbit antibodies, 197
—. See *Davis and Smith*, 209
—. See *McFadden and Smith*, 185
Spenser, Ian D. See *Leete, Marion, and Spenser*, 71
Staub, A., Sinn, L., and **Behrens, Otto K.** Purification and crystallization of glucagon, 619
Stekol, Jakob A. See *Weiss, Anderson, Hsu, and Stekol*, 239
Stockell, Anne. See *Smith, McFadden, Stockell, and Buettner-Janusch*, 197
Stotz, Elmer. See *Lucas, Neufeld, Utterback, Martin, and Stotz*, 775
Stumpf, P. K. See *Castelfranco, Stumpf, and Contopoulou*, 567

T

Takeda, Yoshiro, and **Hara, Masaru.** Significance of ferrous ion and ascorbic acid in the operation of the tricarboxylic acid cycle, 657
Titus, Elwood, and **Weiss, Herbert.** The use of biologically prepared radioactive indicators in metabolic studies: metabolism of pentobarbital, 807
Tomizawa, Henry H., Nutley, Mary L., Narahara, Hiromichi T., and **Williams, Robert H.** The mode of inactivation of insulin by rat liver extracts, 285
Trousof, Natalie. See *La Du, Gaudette, Trousof, and Brodie*, 741
Trubey, Robert H. See *Ravel, Felsing, Lansford, Trubey, and Shive*, 497

U

Utterback, James G. See *Lucas, Neufeld, Utterback, Martin, and Stotz*, 775

V

Vickery, Hubert Bradford. The metabolism of the organic acids of tobacco leaves. VIII. Effect of culture of excised leaves in solutions of L-malate at pH 4 to pH 7, 323

W

Wainfan, Elsie, and **Marx, Walter.** Effects of thyroxine and some related compounds on bacterial oxidations, 441

Watson, C. J., and **Berg, Marie.** Studies of the uroporphyrins. IV. Reexamination of a crucial Waldenström porphyrin, 537

—, **Berg, Marie,** and **Hawkinson, Violet.** Studies of the uroporphyrins. V. The preparation and properties of an artificial Waldenström porphyrin, 547

Weakley, David R. See *Langdon and Weakley,* 167

Weiss, Herbert. See *Titus and Weiss,* 807

Weiss, Sidney, Anderson, Ethel I., Hsu, Peng Tung, and **Stekol, Jakob A.** An adaptation of the Floyd-Lavine procedure for the isolation of methionine to tracer work, 239

Williams, Robert H. See *Tomizawa, Nutley, Narahara, and Williams,* 285

Williams, Roger J. See *Rogers, Pelton, and Williams,* 503

Winje, M. E. See *Benton, Harper, Winje, and Elvehjem,* 677

Y

Young, Jerry M., Jr. See *Sacks, Hurley, and Young,* 723

Z

Zeller, E. Albert, Barsky, James, and **Berman, Elaine R.** Amine oxidases. XI. Inhibition of monoamine oxidase by 1-isonicotinyl-2-isopropylhydrazine, 267

INDEX TO SUBJECTS

A

Acetobacter suboxydans: Glycerol conversion to dihydroxyacetone, *Hauge, King, and Cheldelin,* 1
Pentose cycle, dihydroxyacetone oxidation, relation, *Hauge, King, and Cheldelin,* 11
Acetone: Dihydroxy-. *See* Dihydroxyacetone
Metabolism, *Rhodopseudomonas gelatinosa, Siegel and Smith,* 475
Adipose tissue: Lipogenesis, diet effect, *Hausberger and Milstein,* 483
Alcohol: Consumption, glutamine effect, *Rogers, Pelton, and Williams,* 503
Toxicity, glutamine effect, *Ravel, Felsing, Lansford, Trubey, and Shive,* 497
Alkaloid(s): Biogenesis, *Leete, Marion, and Spenser,* 71
Alkylamine(s): Dealkylation, enzymatic, *La Du, Gaudette, Trousof, and Brodie,* 741
Amine(s): Alkyl-. *See* Alkylamine
Amine oxidase: *Zeller, Barsky, and Berman,* 267
Amino acid(s): Antibodies, *Smith, McFadden, Stockell, and Buettner-Janusch,* 197
Imbalance, tryptophan requirement relation, *Sauberlich and Salmon,* 463
Requirements, *Rose, Borman, Coon, and Lambert,* 579
—, tissue culture, *Eagle,* 839
Amino group(s): Free, antibodies, *McFadden and Smith,* 185
Amino nitrogen: Determination, *Beauchene, Berneking, Schrenk, Mitchell, and Silker,* 731
Aminopyrine: Dealkylation, enzymatic, *La Du, Gaudette, Trousof, and Brodie,* 741
Amphetamine: Deamination, enzymatic, *Axelrod,* 753
Anthranilic acid: 3-Hydroxy-. *See* Hydroxyanthranilic acid
Antibody: Amino acids, *Smith, McFadden, Stockell, and Buettner-Janusch,* 197
— groups, free, *McFadden and Smith,* 185
Aphid: Pea, carbohydrate oxidation, *Newburgh and Cheldelin,* 37
Apoferritin: Ferritin biosynthesis, relation, *Fineberg and Greenberg,* 107
Ascorbic acid: L-, L-sorbose, carbon 14-labeled, conversion to, *Burns, Mosbach, Schulenberg, and Reichenthal,* 507
Tricarboxylic acid cycle relation, *Takeda and Hara,* 657
Azide: Phosphorylation of electron transport and glycolysis, effect, *Robertson and Boyer,* 295

B

Bacillus: *See also Hemophilus*
Bacteria: Oxidation, thyroxine effect, *Wainfan and Marx,* 441
Photosynthetic, acetone metabolism, *Siegel and Smith,* 475
See also Acetobacter, Mycobacterium, Pneumococcus, *Rhodopseudomonas*
Barbital: Pento-. *See* Pentobarbital
Bean: Soy, phosphatides, phosphatidyl ethanolamine preparation, *Scholfield and Dutton,* 633
Benzedrine: *See* Amphetamine
Blood plasma: Lipides, embryo, chick, *Schjeide,* 315
Lipoproteins, embryo, chick, *Schjeide,* 315
Blood serum: Lipoprotein lipide and protein, *Hillyard, Entenman, Feinberg, and Chaikoff,* 79

C

Carbohydrate(s): Oxidation, pea aphid, *Newburgh and Cheldelin,* 37
—, wheat smut fungus, *Newburgh, Claridge, and Cheldelin,* 27
Carboxylic acid: Tri-. *See* Tricarboxylic acid

Carboxypeptidase: Tobacco mosaic virus, action, *Harris and Knight*, 215
Knight, 231
Carotene: Leucine, labeled, conversion to, *Phycomyces, Chichester, Nakayama, Mackinney, and Goodwin*, 515
Catalase: Immunochemistry and determination, *Deutsch and Seabra*, 455
Tumors, *Seabra and Deutsch*, 447
Cord factor: *Mycobacterium tuberculosis*, *Noll and Bloch*, 251
Cysteine: γ-Glutamyl-. *See* Glutamylcysteine

D

Dehydrogenase: Glyceraldehyde-3-phosphate. *See* Glyceraldehyde-3-phosphate dehydrogenase
Dermatitic compound(s): *Myrothecium verrucaria, Bowden and Schantz*, 365
Diabetes: Liver glucose and glycogen carbons, pyruvate carbon 14-labeled, relation, *Landau, Hastings, and Nesbett*, 525
Phosphorylation, oxidative, mitochondria, *Parks, Adler, and Copenhaver*, 693
Diet: Adipose tissue lipogenesis, effect, *Hausberger and Milstein*, 483
Liver glucose-6-phosphatase, effect, *Langdon and Weakley*, 167
Dihydroxyacetone: Glycerol conversion to, *Acetobacter suboxydans, Hauge, King, and Cheldelin*, 1
Oxidation, *Acetobacter suboxydans* pentose cycle, relation, *Hauge, King, and Cheldelin*, 11
Diisopropylphosphoryl chymotrypsin: Phosphoserylglycine from, *Schaffer, Harshman, and Engle*, 799
Dipeptide(s): Tripeptidase action, *Davis and Smith*, 209

E

Embryo: Chick, blood plasma lipides and lipoproteins, *Schjeide*, 315
Enzyme(s): Alkylamine dealkylation, *La Du, Gaudette, Trousof, and Brodie*, 741
Aminopyrine dealkylation, *La Du, Gaudette, Trousof, and Brodie*, 741
Amphetamine deamination, *Axelrod*, 753
γ-Glutamylcysteine synthesis, *Mandeles and Bloch*, 639
Phosphorylase-rupturing, purification and properties, *Keller and Cori*, 127
—, trypsin substrates, effect, *Keller and Fried*, 143
See also Amine oxidase, Carboxypeptidase
Estradiol: -17β, fate, *Beer and Gallagher*, 335, 351
Estrogen: Metabolites, excretion, *Beer and Gallagher*, 335, 351
Uterus peroxidase, effect, *Lucas, Neufeld, Utterback, Martin, and Stotz*, 775
Estrone: Fate, *Beer and Gallagher*, 335
Ethanolamine: Phosphatidyl. *See* Phosphatidyl ethanolamine

F

Fat: Liver, protein-low diet, *Benton, Harper, Winje, and Elvehjem*, 677
Metabolism, plants, *Castelfranco, Stumpf, and Contopoulou*, 567
See also Adipose tissue
Fatty acid: Glyceride, absorption, *Borgström*, 671
Ferritin: Apo-. *See* Apoferritin
Ferritin: Biosynthesis, *Fineberg and Greenberg*, 91
—, apoferritin relation, *Fineberg and Greenberg*, 107
—, iron relation, *Fineberg and Greenberg*, 97
Crystallization, *Fineberg and Greenberg*, 91
Ferrous ion: Tricarboxylic acid cycle relation, *Takeda and Hara*, 657
Floyd-Lavine: Procedure, methionine isolation, *Weiss, Anderson, Hsu, and Stekol*, 239
Fructose: Carbon 14-labeled, liver and muscle glycogen from, *Hers*, 373

Fungus: Wheat smut, carbohydrate oxidation, *Newburgh, Claridge, and Cheldelin,* 27
See also Myrothecium, Phycomyces

G

Galactose: Carbon 14-labeled, metabolism, *Carleton, Misler, and Roberts,* 427
Globin: Myo-. *See* Myoglobin
Glucagon: Purification and crystallization, *Staub, Sinn, and Behrens,* 619
Glucosamine(s): Nitrogen-substituted, hexokinase, effect, *Maley and Lardy,* 765
—, synthesis, *Maley and Lardy,* 765
Glucose: Carbon, liver, pyruvate carbon 14-labeled, diabetes, relation, *Landau, Hastings, and Nesbett,* 525
Carbon 14-labeled, metabolism, *Carleton, Misler, and Roberts,* 427
D-, L-sorbose, carbon 14-labeled, conversion to, *Burns, Mosbach, Schulenberg, and Reichenthal,* 507
Glucose-6-phosphatase: Liver, hormonal factors and diet, effect, *Langdon and Weakley,* 167
Glutaminase: Liver, vitamin B_6 effect, *Beaton and Ozawa,* 685
Glutamine: Alcohol consumption, effect, *Rogers, Pelton, and Williams,* 503
— toxicity, effect, *Ravel, Felsing, Lansford, Trubey, and Shive,* 497
Glutamylcysteine: γ-, synthesis, enzymatic, *Mandeles and Bloch,* 639
Glyceraldehyde-3-phosphate dehydrogenase: D-, light scattering, *Dandliker and Fox,* 275
Sulfhydryl groups, yeast, methyl mercury nitrate reaction, *Halsey,* 589
Glyceride(s): Fatty acid, absorption, *Borgström,* 671
Tri-. *See* Triglyceride
Glycerol: Dihydroxyacetone from, *Acetobacter suboxydans, Hauge, King, and Cheldelin,* 1
Glycine: Phosphoseryl-. *See* Phosphoserylglycine
Glycogen: Carbon, liver, pyruvate carbon 14-labeled, diabetes, relation, *Landau, Hastings, and Nesbett,* 525
Liver, fructose-1-C^{14} conversion to, *Hers,* 373
—, sorbitol-1-C^{14} conversion to, *Hers,* 373
Muscle, fructose-1-C^{14} conversion to, *Hers,* 373
—, sorbitol-1-C^{14} conversion to, *Hers,* 373
Glycolic acid: Plant palmitate oxidase, relation, *Castelfranco, Stumpf, and Contopoulou,* 567
Glycolysis: Phosphorylation, azide effect, *Robertson and Boyer,* 295

H

Hemophilus parainfluenzae: Putrescine requirement, *Herbst, Glinos, and Amundsen,* 175
Hepatic: *See* Liver
Hexokinase: Glucosamine, nitrogen-substituted, effect, *Maley and Lardy,* 765
Hexose monophosphate: Shunt, liver, *Katz, Abraham, Hill, and Chaikoff,* 853
Hormone(s): Factors, liver glucose-6-phosphatase, effect, *Langdon and Weakley,* 167
Tryptophan peroxidase, effect, *Knox and Auerbach,* 307
Hydrazine: 1-Isonicotinyl-2-isopropyl-. *See* Isonicotinyl-2-isopropylhydrazine
Hydroxyanthranilic acid: 3-, related compounds, metabolism, *D'Angeli, Koski, and Henderson,* 781

I

Insulin: Iodine-labeled, liver extract effect, *Mirsky, Perisutti, and Dixon,* 397
Liver extract effect, *Tomizawa, Nutley, Narahara, and Williams,* 285
Iron: Ferritin biosynthesis, relation, *Fineberg and Greenberg,* 97

Isonicotinyl-2-isopropylhydrazine: 1-, monoamine oxidase effect, *Zeller, Barsky, and Berman,* 267

K

Ketolase: Trans-. *See* Transketolase

L

Lactose: Carbon 14-labeled, metabolism, *Carleton, Misler, and Roberts,* 427
Lecithin: Metabolism, liver, *Rodbell and Hanahan,* 595
Synthesis, liver, *Rodbell and Hanahan,* 607
Leucine: Labeled, carotene from, *Phycomyces, Chichester, Nakayama, Mackinney, and Goodwin,* 515
Lipase: Pancreas, triglyceride digestion, effect, *Mattson and Beck,* 115
Lipide(s): Blood plasma, embryo, chick, *Schjeide,* 315
— serum lipoprotein, *Hillyard, Entenman, Feinberg, and Chaikoff,* 79
Lipogenesis: Adipose tissue, diet effect, *Hausberger and Milstein,* 483
Lipoprotein(s): Blood plasma, embryo, chick, *Schjeide,* 315
— serum, lipide and protein, *Hillyard, Entenman, Feinberg, and Chaikoff,* 79
Liver: Extracts, insulin, effect, *Tomizawa, Nutley, Narahara, and Williams,* 285
—, insulin-I^{131}, effect, *Mirsky, Perisutti, and Dixon,* 397
Fat, protein-low diet, *Benton, Harper, Winje, and Elvehjem,* 677
Glucose carbon, pyruvate carbon 14-labeled, diabetes, relation, *Landau, Hastings, and Nesbett,* 525
Glucose-6-phosphatase, hormonal factors and diet, effect, *Langdon and Weakley,* 167
Glutaminase, vitamin B_6 effect, *Beaton and Ozawa,* 685
Glycogen carbon, pyruvate carbon 14-labeled, diabetes, relation, *Landau, Hastings, and Nesbett,* 525
—, fructose-1-C^{14} conversion to, *Hers,* 373
Liver—*continued:*
Glycogen, sorbitol-1-C^{14} conversion to, *Hers,* 373
Hexose monophosphate shunt, *Katz, Abraham, Hill, and Chaikoff,* 853
Lecithin metabolism, *Rodbell and Hanahan,* 595
— synthesis, *Rodbell and Hanahan,* 607
Ribonucleic acid, *de Lamirande, Allard, and Cantero,* 519
Lysine: Requirement, *Rose, Borman, Coon, and Lambert,* 579

M

Macrosiphum pisi: *See* Aphid
Malate: L-, tobacco leaf culture, effect, *Vickery,* 323
Manganese: Organs and organelles, *Maynard and Cotzias,* 489
Mannitol: Metabolism, pneumococcus, *Marmur and Hotchkiss,* 383
Methionine: Isolation, Floyd-Lavine procedure, *Weiss, Anderson, Hsu, and Stekol,* 239
Methyl mercury nitrate: Yeast glyceraldehyde-3-phosphate dehydrogenase sulfhydryl groups, reaction, *Halsey,* 589
Mitochondrion: Phosphorylation, oxidative, diabetes, *Parks, Adler, and Copenhaver,* 693
Monoamine oxidase: 1-Isonicotinyl-2-isopropylhydrazine effect, *Zeller, Barsky, and Berman,* 267
Mosaic: Tobacco, virus, carboxypeptidase action, *Harris and Knight,* 215
Knight, 231
Muscle: Glycogen, fructose-1-C^{14} conversion to, *Hers,* 373
—, sorbitol-1-C^{14} conversion to, *Hers,* 373
Mycobacterium tuberculosis: Cord factor, *Noll and Bloch,* 251
Myoglobin: Biochemistry, *Lewis and Schweigert,* 647
Myrothecium verrucaria: Dermatitic compounds, *Bowden and Schantz,* 365

N

Nitrogen: Amino. *See* Amino nitrogen
-Terminal sequence, antibodies, *McFadden and Smith,* 185
Nucleic acid: Ribo-. *See* Ribonucleic acid
Nucleic acid(s): Tissues, determination, *Ceriotti,* 59

O

Organelle(s): Intracellular, manganese, *Maynard and Cotzias,* 489
Organic acid(s): Tobacco leaves, metabolism, *Vickery,* 323
Ornithine: Stachydrine biosynthesis, relation, *Leete, Marion, and Spenser,* 71
Oxidase: Amine. *See* Amine oxidase
Monoamine. *See* Monoamine oxidase
Palmitate. *See* Palmitate oxidase
Oxygen: Consumption, tissues, vitamin E effect, *Rosenkrantz,* 789

P

Palmitate oxidase: Plant, glycolic acid relation, *Castelfranco, Stumpf, and Contopoulou,* 567
Pancreas: Lipase, triglyceride digestion, effect, *Mattson and Beck,* 115
Pea: Aphid, carbohydrate oxidation, *Newburgh and Cheldelin,* 37
Pentobarbital: Metabolism, radioactive indicators in study, *Titus and Weiss,* 807
Pentose: Cycle, *Acetobacter suboxydans,* dihydroxyacetone oxidation, relation, *Hauge, King, and Cheldelin,* 11
Peptidase: Carboxy-. *See* Carboxypeptidase
Tri-. *See* Tripeptidase
Peptide(s): Di-. *See* Dipeptides
Peroxidase: Tryptophan. *See* Tryptophan peroxidase
Uterus, estrogen effect, *Lucas, Neufeld, Utterback, Martin, and Stotz,* 775
Phosphatase: Glucose-6-. *See* Glucose-6-phosphatase
Phosphatide(s): Soy bean, phosphatidyl ethanolamine preparation, *Schlofield and Dutton,* 633
Phosphatidyl ethanolamine: Soy bean phosphatides, preparation, *Schlofield and Dutton,* 633
Phosphorus: Ribonucleic acid, metabolism, *Sacks, Hurley, and Young,* 723
Phosphorylase: *a*, trypsin effect, *Keller,* 135
-Rupturing enzyme, purification and properties, *Keller and Cori,* 127
——, trypsin substrates, effect, *Keller and Fried,* 143
Phosphorylation: Azide effect, *Robertson and Boyer,* 295
Oxidative, mitochondria, diabetes, *Parks, Adler, and Copenhaver,* 693
Phosphoserylglycine: Diisopropylphosphoryl chymotrypsin conversion to, *Schaffer, Harshman, and Engle,* 799
Photosynthesis: Bacteria, acetone metabolism, *Siegel and Smith,* 475
Phycomyces: Leucine, labeled, conversion to carotene, *Chichester, Nakayama, Mackinney, and Goodwin,* 515
Plant(s): Fat metabolism, *Castelfranco, Stumpf, and Contopoulou,* 567
Palmitate oxidase, glycolic acid relation, *Castelfranco, Stumpf, and Contopoulou,* 567
Pneumococcus: Mannitol metabolism, *Marmur and Hotchkiss,* 383
Porphyrin: Uro-. *See* Uroporphyrin
Waldenström, *Watson and Berg,* 537
—, preparation and properties, *Watson, Berg, and Hawkinson,* 547
Protein: Blood serum lipoprotein, *Hillyard, Entenman, Feinberg, and Chaikoff,* 79
Lipo-. *See* Lipoprotein
-Low diet, liver fat, *Benton, Harper, Winje, and Elvehjem,* 677
Putrescine: Requirement, *Hemophilus parainfluenzae, Herbst, Glinos, and Amundsen,* 175

Pyramidon: *See* Aminopyrine
Pyruvate: Carbon 14-labeled, liver glucose and glycogen carbons, diabetes, relation, *Landau, Hastings, and Nesbett,* 525
Oxidation, *meso*-tartrate effect, *Quastel and Scholefield,* 245

R

Rhodopseudomonas gelatinosa: Acetone metabolism, *Siegel and Smith,* 475
Ribonucleic acid: Liver, *de Lamirande, Allard, and Cantero,* 519
Phosphorus, metabolism, *Sacks, Hurley, and Young,* 723

S

Serine: Biosynthesis, *Alexander and Greenberg,* 821
—, mechanism, *Kisliuk and Sakami,* 47
Smut: Fungus, wheat, carbohydrate oxidation, *Newburgh, Claridge, and Cheldelin,* 27
Sorbitol: Carbon 14-labeled, liver and muscle glycogen from, *Hers,* 373
Sorbose: L-, carbon 14-labeled, L-ascorbic acid and D-glucose from, *Burns, Mosbach, Schulenberg, and Reichenthal,* 507
Soy bean: *See* Bean
Stachydrine: Biosynthesis, ornithine relation, *Leete, Marion, and Spenser,* 71
Sucrose: Biosynthesis, *Cardini, Leloir, and Chiriboga,* 149
Sucrose phosphate: Biosynthesis, *Leloir and Cardini,* 157
Sulfhydryl group(s): Yeast glyceraldehyde-3-phosphate dehydrogenase, methyl mercury nitrate reaction, *Halsey,* 589

T

Tartrate: *meso*-, pyruvate oxidation, effect, *Quastel and Scholefield,* 245
Thyronine: Triiodo-. *See* Triiodothyronine
Thyroxine: Bacterial oxidation, effect, *Wainfan and Marx,* 441
Metabolism, eviscerated rat, *Flock and Bollman,* 709
Tilletia caries: *See* Smut
Tissue culture: Amino acid requirements, *Eagle,* 839
Tobacco: Leaves, L-malate solutions, culture effect, *Vickery,* 323
—, organic acids, metabolism, *Vickery,* 323
Mosaic virus, carboxypeptidase action, *Harris and Knight,* 215
Knight, 231
Tomato: Bushy stunt virus, *de Fremery and Knight,* 559
Transketolase: Crystalline, yeast, isolation and properties, *de la Haba, Leder, and Racker,* 409
Tricarboxylic acid: Cycle, ferrous ion and ascorbic acid relation, *Takeda and Hara,* 657
Triglyceride(s): Digestion, lipase, pancreas, effect, *Mattson and Beck,* 115
Triiodothyronine: Metabolism, eviscerated rat, *Flock and Bollman,* 709
Tripeptidase: Dipeptides, action, *Davis and Smith,* 209
Trypsin: Diisopropylphosphoryl chymo-. *See* Diisopropylphosphoryl chymotrypsin
Phosphorylase *a*, effect, *Keller,* 135
Substrates, phosphorylase-rupturing enzyme, effect, *Keller and Fried,* 143
Tryptophan: D-, metabolism, *Langner and Berg,* 699
Requirement, amino acid imbalance, relation, *Sauberlich and Salmon,* 463
Tryptophan peroxidase: Hormones, effect, *Knox and Auerbach,* 307
Tumor(s): Catalase, *Seabra and Deutsch,* 447

U

Uroporphyrin(s): *Watson and Berg,* 537

Watson, Berg, and Hawkinson, 547
Uterus: Peroxidase, estrogen effect, *Lucas, Neufeld, Utterback, Martin, and Stotz,* 775

V

Virus: Tobacco mosaic, carboxypeptidase action, *Harris and Knight,* 215
Knight, 231
Tomato bushy stunt, *de Fremery and Knight,* 559
Vitamin: B_6, liver glutaminase, effect, *Beaton and Ozawa,* 685
E, deficiency, *Rosenkrantz,* 789
—, oxygen consumption, tissues, effect, *Rosenkrantz,* 789

W

Waldenström: Porphyrin, *Watson and Berg,* 537
—, preparation and properties, *Watson, Berg, and Hawkinson,* 547
Wheat: Smut fungus, carbohydrate oxidation, *Newburgh, Claridge, and Cheldelin,* 27

Y

Yeast: Glyceraldehyde-3-phosphate dehydrogenase sulfhydryl groups, methyl mercury nitrate reaction, *Halsey,* 589
Transketolase, crystalline, isolation and properties, *de la Haba, Leder, and Racker,* 409
